UC Rusal promotes the research

UC Rusal has announced plans to invest more than USD 2 million to find the best new applications for aluminium and to develop innovative products. As part of this Global

Technology and Innovation Research Project UC Rusal and the International Aluminium Institute (IAI) are inviting leading universities and research centres from around the world to apply for the funding of innovative research projects. Over the next three years, the Global Technology and Innovation Project will select the most ground breaking ideas and research projects, with the aim of expanding the use of aluminium. New applications will be developed where the unique features of the metal could bring environmental benefits, improve energy efficiency, optimize use of resources, encourage recycling, and create secure packaging and transportation methods. Up to 10 research projects will receive funding. Most of the new ..read more

BMW Museum: new opening in Munich

Last Saturday, the BMW Museum opened again the doors of its traditional seat, located near BMW's headquarter in Munich, and welcomed the visitors with a combination of innovative architecture, exhibition dressing and mass media. The collection is comprised of 125 original models displayed in 25 exhibition halls. After the opening, the Museum is expected to record more than 400,000 visitors per year. Within the renovation project, the so-called 'Museum bowl' has been connected to the adjacent low building, which was part of BMW's headquarter, the ..read more

Specially watched copper and aluminium

We read in Sole 24 Ore that over the past few days, there has been a separation in the prices of non ferrous metals on the London Metal Exchange, where copper and aluminium finished the week with again, whereas zinc, lead and nickel registered a loss. A selective

Aluminium chips recycling

The success of any melting system depends on the physical characteristics and nature of the feedstock, therefore, the integration of durable, efficient pre-treatment equipment is crucial in achieving full processing efficiency and hence, a high metal recovery and payback.
